Summary

Table of Contents

Commercial Vehicle ADAS Market Size

The global commercial vehicle ADAS market was valued at USD 15.4 billion in 2025. The market is expected to grow from USD 17.7 billion in 2026 to USD 76.3 billion in 2035 at a CAGR of 17.7%, according to latest report published by Global Market Insights Inc.

Commercial Vehicle ADAS Market Key Takeaways

Market Size & Growth

- 2025 Market Size: USD 15.4 Billion
- 2026 Market Size: USD 17.7 Billion
- 2035 Forecast Market Size: USD 76.3 Billion
- CAGR (2026–2035): 17.7%

Regional Dominance

- Largest Market: North America
- Fastest Growing Region: Asia Pacific

Key Market Drivers

- Stringent Government Safety Regulations for Commercial Vehicles.
- Rising Road Accidents Involving Heavy and Commercial Vehicles.
- Growing Adoption of Fleet Safety and Telematics Solutions.
- Rapid Growth of E-commerce and Last-Mile Delivery Fleets

The growing push for and adoption of road safety measures is one of the major reasons leading to the growing demand for integration of advanced driver assistance systems (ADAS) in commercial vehicles segment.

ADAS helps drivers to identify pedestrians, avoid collisions, and get lane assistance and monitoring in situations like sleep or uncertain health issues. Its growing popularity among truck and bus drivers has gained too much since its inception.

In this year to date, over 3,850 patents have been filed on Advanced Driver Assistance Systems (ADAS). It is up about 10% compared to 2024. Such increasing numbers every year reflect how key players are seeing potential opportunities with ADAS in the coming years.

In recent years, the U.S. has reported between 143,000 and 166,000 truck accidents annually, according to FMCSA. Trucks were involved in about 6% of these accidents. Due to the rise in road accidents, fleet operators and governments are adopting Advanced Driver-Assistance Systems (ADAS) to help reduce such incidents.

Similarly, the EU reported that in 2024, 19,940 people lost their lives in road crashes across the EU. This represents a 2% decrease compared to 2023. The main reason behind this decrease is the region's view on the improvement in vehicle safety.

Call Us

Commercial Vehicle ADAS Market Trends

AI and ML are being integrated into ADAS as it helps improve various functions of commercial vehicles. This integration of AI and ML is expected to help process real time data which will be helpful for making timely decisions and thus improve the working status of vehicles. This will thus improve the safety of vehicles and reduce the risk of accidents resulting from human errors.

For instance, in October 2025, Gauzy launched its new Smart-Vision Camera Monitor System (CMS) for buses and coaches. This advanced driver assistance system (ADAS), with AI-powered safety features, is displayed at Gauzy's Booth 711 in Hall 7 and on four buses at Yutong's Booth 305 in Hall 3.

Moreover, Vehicle-to-Everything (V2X) is growing into a significant vehicle technology trend as it enables communication between commercial vehicles and other vehicles, infrastructure, and cloud networks. V2X helps with enhanced situational awareness, thus helping vehicles to understand traffic, hazards, and other conditions, thus improving safety and operational efficiency for fleet management.

Qualcomm Technologies in September 2025 partnered with the BMW to launch a new automated driving (AD) system in the BMW iX3. This system is the result of three years of collaboration. The BMW iX3 also

Based on sensor, the market is segmented into radar, LiDAR, ultrasonic, camera, and others. In 2025, the camera segment held a market share of over 34% and was valued at around USD 5.3 billion.

- Image sensors support various vision-based ADAS functions that include lane departure warnings, traffic sign recognition, borderline pedestrian detection, and forward collision warning systems. These functions are achieved through the real time video capturing and processing services for safer navigation which contributes to the demand for image sensors in ADAS systems.
- In September 2024, Euler Motors launched an electric LCV called Storm EV in India. The launched vehicle is priced at USD 10,324 and it marks a significant advancement in the LCV segment as it is the first electric LCV in the country which is equipped with ADAS. Storm EV is equipped with features such as night vision system, front and rear camera collision alerts, and traffic light alerts. These features improve visibility and safety, especially during nighttime operation.
- Heavy commercial vehicles are increasingly adopting advanced driver-assistance systems for increasing their safety features. This is being done through the adoption of driving image sensors that provide 360-degree surround view cameras with high dynamic range imaging and night vision

Based on distribution channel, the commercial vehicle ADAS market is divided into OEM and aftermarket. The OEM segment is expected to grow at a CAGR of 17.5% between 2026 and 2035.

- OEMs design, develop, and manufacture vehicles from scratch and integrate systems such as ADAS at the manufacturing stage itself. This ensures that vehicles can be made available with advanced safety features such as standard or optional equipment. This is primarily the reason as to why the OEM segment dominates the distribution channel for ADAS.
- Ashok Leyland introduced The Saathi as its new entry-level light commercial vehicle in January 2025 at the Bharat Mobility Global Expo 2025. The Saathi is equipped with a 1.5-liter, 3-cylinder turbocharged diesel engine with intercooler that boasts an impressive 45 HP of power along with 110 Nm of torque. It is also equipped with rear parking sensors for improved safety during reverse actions.

- Fleet operators and other commercial vehicle buyers usually prefer fully integrated solutions, which include in-built ADAS systems. This one-stop-shop capability fuels the demand of ADAS technologies with other vehicle features, strengthening OEMs position as a distributor channel for ADAS.
- OEMs provide extended support and maintenance of ADAS along with regular services through its partnership with fleet operators. This ongoing relationship enables enhanced satisfaction for the OEMs and positions them as the preferred distribution channel because they provide more comprehensive solutions, unlike aftermarket providers.

Based on system, the commercial vehicle ADAS market is divided into adaptive cruise control, blind spot

Administration (FMCSA), part of the Department of Transportation, is ADAS technologies. Its "Tech-Celerate Now" program, in partnership ion Systems (ITS) Joint Program Office, aims to increase ADAS

ted to reach USD 25.3 billion by 2035 and expected to grow at a CAGR

e in terms of sale of commercial vehicles, and according to an OICA ommercial vehicles in 2024 stood at 13.4 million.

e largest and most advanced fleets of commercial vehicles, which includes a large fleet of long-haul trucks and delivery vehicles. In the U.S., fleet owners focus on safety, operational efficiency, and cost minimization. This increases the demand for ADAS solutions that increase safety, reduce fuel consumptions, and accidents.

- The country is home of various automotive leaders such as Continental. These companies have created advanced ADAS and autonomous driving systems, which makes the country a major market for advanced safety system technologies for commercial vehicles.
- Canada seems to grow at the faster growth rate between 2026 and 2035. This is due to stricter safety rules, more freight movement in the country, and a stronger focus on road safety. Government programs supporting advanced safety technologies and following North American safety standards are helping this growth.

The Europe commercial vehicle ADAS market accounted for USD 4.2 billion in 2025 and is anticipated to grow at the CAGR of 18% between 2026 and 2035.

- Advanced Driver Assistance Systems (ADAS) are essential for Europe's commercial fleet in order to achieve safer roads, minimize accident-related costs and risks from fatigue and distraction, particularly in long-distance and city logistics.
- The European Union is promoting the adoption of ADAS through the General Safety Regulation (GSR2) contained in Regulation (EU) 2019/2144. This legislation stipulates that all vehicle classes (M, N, and O) in the EU will be fitted with advanced safety features. It will be in force for all newly registered vehicles starting from July 2024.
- For commercial vehicles like buses, coaches, and trucks, the regulation focuses on technologies that improve blind spot detection, warn about possible collisions with pedestrians or cyclists, and monitor tire pressure, along with other safety features.
- The main objective of the European Union is mandate to roll out specific ADAS for reducing serious injuries and fatalities on roads to all new vehicles, including those in commercial fleets.
- They reflect the European Commission's determination to secure the best safety technologies for the protection of vulnerable road users in the case of commercial vehicles through such rules as

esearch and development of automotive technologies. This includes
nterprises and research center are also investing in the development
tegration of ADAS into commercial vehicles which contributes to the country's large market share in market.

The Asia Pacific commercial vehicle ADAS market is estimated to reach USD 21.6 billion by 2035, by growing at a CAGR of 19.1% during the analysis timeframe.

- The need for ADAS in countries like India is a must. The number of road accident fatalities in India rose 2.3% to over 1.77 lakh in 2024 due to reasons such as over speeding, drunken driving, driving on the wrong sides, and phone usage while driving. It was observed that highways had recorded the highest number of severe accidents.
- To reduce these numbers and improve the road safety, the Indian government in January 2025 announced their plan of mandating the adoption of ADAS systems in new heavy trucks and buses. Through this the government aims to control the increasing road accidents involving heavy vehicles and thus improve road safety.
- Modern retail stores grow in countries like China, Japan, Australia, and India. Supermarket, hypermarket, and convenience store chains, which operate on a large scale, are adding self-checkout to their stores in order to serve more customers and to be able to catch up with the changing needs of the customers.

China is estimated to grow with a CAGR of 20.1% in the projected period between 2026 and 2035, in the Asia Pacific commercial vehicle ADAS market.

- China holds a significant share in commercial vehicle market due to its rising fleet number of trucks, buses, and delivery vehicles. In 2024, China was ranked second by OICA due to its high sales of commercial vehicles which was added up to 4 million in that year.
- The implementation of ADAS solutions has changed from luxury to necessity for commercial vehicles for both OEMs and fleet managers as demand for advanced safety features and driver assistance technologies increases.
- The Chinese government is heavily investing in developing and implementing policies and subsidies aimed at enhancing road safety and accident reduction in the country. The growing expansion of

ADAS market is estimated to reach USD 1.1 billion in 2025 and is n over the forecast period.

os Aires and Bogotá have seen a rise in registered vehicles, leading to o Paulo, the Transport Engineering Company (CET) reports that ks by 40%.

ses LCVs for last-mile deliveries and HCVs for long-haul transport, is adopting ADAS to reduce risks, lower insurance costs, and improve safety for drivers and cargo. According to Argentina's National Road Safety Agency (ANSV), vehicles with ADAS in Buenos Aires had a 28% lower accident rate compared to those without.

- To address safety concerns, some Latin American governments have introduced or are planning regulations, with Brazil leading the way. Brazil's CONTRAN Resolution 910/2022 requires all new vehicles to include Electronic Stability Control (ESC) and Automatic Emergency Braking (AEB) by 2024.

Brazil is estimated to grow with a CAGR of 15.6% between 2026 and 2035, in the Latin America commercial vehicle ADAS market.

- The extensive area of Brazil and its heavily dependence on the road freight transportation necessitate the incorporation of Advanced Driver Assistance Systems (ADAS) in its commercial fleet.
- Alongside the country's congested urban areas, the hightech solutions like Forward Collision Warning (FCW), Automatic Emergency Braking (AEB), and Lane Departure Warning (LDW) can certainly take part in accidents involving commercial vehicles, which, unfortunately, are still very frequent due to the long roads.
- The Brazilian government, through the National Traffic Council (CONTRAN), has introduced rules to promote key safety technologies that are part of ADAS. One important rule is CONTRAN Resolution 910/2022 (and its updates), which requires all new vehicles sold in Brazil to have essential safety systems.

The Middle East and Africa accounted for USD 785.7 million in 2025 and is anticipated to show lucrative growth over the forecast period.

- The national goals in the MEA region emphasize the necessity of Advanced Driver Assistance Systems (ADAS) for the enhancement of both road safety and logistics. The UAE and Saudi Arabia, which are

- For example, the Dubai Autonomous Transportation Strategy aims to make 25% of all trips autonomous by 2030. To achieve this, ADAS technologies must first be developed, reliable, and standardized for public and commercial vehicles.
- There is no specific national rule requiring Level 1 or Level 2 ADAS features (like AEB or LDW) for all commercial fleets. However, the government is clearly moving toward regulating advanced vehicle technologies. For instance, Dubai Law No. (9) of 2023, which regulates Autonomous Vehicles, states that no Autonomous Vehicle can operate without an RTA license. The law also requires vehicles to pass technical inspections, meet safety standards, and have systems that can interact with roads and traffic signs as per RTA rules.

Commercial Vehicle ADAS Market Share

- The top 7 companies in the commercial vehicle ADAS industry are Bosch, Continental, ZF, Valeo, Daimler, Ford and Volvo, contributing 42.5% of the market in 2025.

- **Bosch** uses radar sensors, cameras, and AI to provide advanced ADAS for commercial vehicles. Features like blind spot detection, lane keeping assist, emergency braking, and road sign recognition improve safety, efficiency, and driver comfort in trucks.
- **Continental** offers ADAS solutions for trucks with a focus on sensors and software. Key features include adaptive cruise control, collision avoidance, and pedestrian detection. These systems improve road safety and meet global regulations.
- **ZF** offers ADAS for trucks that uses cameras, radars, and actuators. Features like blind spot warnings, emergency braking, and stability control help protect road users and assist drivers.
- **Valeo** provides ADAS for commercial vehicles with cameras, sensors, and domain controllers. Features like 360° surround view, driver monitoring, and automated parking make driving safer and improve environmental awareness.
- **Daimler** includes ADAS like Active Brake Assist and Sideguard Assist in Mercedes trucks. These features detect pedestrians, cyclists, and hazards, enabling automatic braking to improve fleet safety and meet regulations.

- Bosch uses its ADAS ecosystem, which includes radar, cameras, and vehicle supercomputers, to provide cost-effective and scalable solutions for different commercial vehicle segments.
- Continental stands out with its "Road to Cloud" ADAS system, which combines advanced sensors and High-Performance Computers (HPCs). This makes system integration easier and supports modern vehicle designs.
- ZF focuses on smart cameras and chassis control systems, offering ADAS solutions tested for tough real-world conditions. Its proprietary technology, like OnGuard MAX, gives it an edge.
- Valeo has a sensor portfolio including its mass-produced LiDAR (SCALA 3). With heavy investments in AI and system controllers, Valeo leads in ADAS innovation.
- Daimler Truck uses its expertise as a leading OEM to include advanced safety features in its brands like Freightliner and Mercedes-Benz. It leads the heavy commercial vehicle market in North America and Europe.
- Ford Pro, Ford's commercial business unit, offers a complete ADAS solution by combining vehicle technology with fleet management software and services.
- Volvo focuses on safety and combines advanced ADAS with its expertise in electric trucks. This helps prevent accidents, improves driver comfort, and supports its goal of zero-emission transport.
